

CCH-100 Captionwear™ Eyeglasses

Step 1 Turn On Power Supply

Put the lanyard around your neck, CCH-100 Captionwear™ eyeglasses on your head and slide the power supply switch on. The green LED will light. Sample captions will display. When you're in the theater, a welcome message will be displayed until the movie starts. When captioned content plays, the captions will appear. **Note: Not all previews or movies are captioned.**

Step 2 Select Language

Push the red language button to select a different language or adjust captions that may appear upside-down. **Note: The default language is English so it will not be necessary to push the language button unless you prefer another language.**

Step 3 Captionwear Adjustments

You may adjust the knobs on the side of the CCH-100 CaptionWear™ eyeglasses to move the text up and down. If the text is cut off on the left or right side, use the front lever to center the text. The black focus ring may be rotated to improve the text focus. **Note: If you cannot view the text, the captions may need to be projected into the other lens. Please see your Theater Operator for assistance.**

Step 4 Turn off Power Supply

When the movie is over, slide power supply switch to off position. The green LED will turn off. Return the unit.

Note: If you cannot view the text, the captions may need to be projected into the other lens. Please see your Theater Operator for assistance.
